**PER CAPITA INCOME (1987) ESTIMATES FOR PENNSYLVANIA, COUNTIES, & MINOR CIVIL DIVISIONS (MCDs)**

The figures shown in these tables may not coincide with the areas covered in the latest decennial census. Areas included in this series tables are (1) counties and (2) active minor civil divisions (MCD's). The estimates are presented in each table in county order, with all functioning MCD's listed in alphabetical order. MCD's are always identified in the listing by the term "township," "town," "city," or "borough." When MCD's fall in more than one county, each county piece is marked "(part)".

PER CAPITA INCOME METHODOLOGY

The 1987 per capita income (PCI) figure is the estimated average amount per person of total money income received during the calendar year 1987 for all persons residing in a given political jurisdiction. The 1987 estimates are based on the 1980 census and have been updated using rates of change developed from various administrative record sets and compilations, mainly from the Internal Revenue Service (IRS) and the Bureau of Economic Analysis (BEA).

The PCI estimates are based on a money income concept. Total money income is defined by the Bureau of the Census for statistical purposes as the sum of:

Wage or salary income
Net nonfarm self-employment income
Net farm self-employment income
Interest, dividends, and net rental income
Social Security and railroad retirement income
Supplemental Security Income. Aid to Families With Dependent Children and other public assistance
All other regularly received income such as Veterans' payments, pensions, unemployment compensation, and alimony

Receipts not counted as income include various "lump-sum" payments such as capital gains or inheritances. The total represents the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Procedures for State and county estimates. As noted above, the 1987 State and county PCI estimates were based on the 1980 census. Income data from the 1980 census reflect income received in the calendar year 1979. The updates for States were developed by carrying forward the aggregate amount (i.e., the sum of all individual incomes in the State) independently for each type of income identified in the census to reflect differential changes in these income sources between 1979 and 1987. Federal tax data from 1979 and 1987 were used to estimate the change in wage or

salary income at the State or county level. All other types of income for these governmental units were updated using rates of change based on estimates of aggregate money income provided by BEA.

At the county level, several modifications of these procedures were used to obtain a better estimate of income change. For example, the IRS data for county jurisdictions were subject to nonreporting of address information on the tax return and to misassignment of geographic location for reported addresses. To minimize the impact on the estimates from such potential sources of error, per capita wage or salary income for counties was updated intact as a per capita figure using the percentage change in wage or salary income per exemption reported on IRS returns.

In addition, because of differences in the definition of income, data collection techniques, and estimation procedures, 1979 income estimates from the census and BEA were not strictly comparable. These differences were more especially evident at the county level for nonfarm and farm self-employment income. BEA estimates for these types of income tend to have considerably more year-to-year variation than estimates derived from surveys and censuses. To minimize the effects on these differences, constraints were imposed on the rate of change in income from these sources in developing the 1987 PCI updates.

As a final step to ensure a uniform series of estimates at the State and county levels, the updated county per capita figures were converted to a total aggregate income and were adjusted to agree with the State aggregate level before a final county per capita income was calculated.

Procedures for subcounty per capita income estimates. The 1987 PCI estimates for subcounty governmental units were developed using a methodology similar to that used to derive the county-level figures. However, there are differences in the number of separate categories of income types used in the estimation procedure, and in the sources used to update the income components. The 1987 estimates were updated from the 1979 figures. The subcounty income data were uniformly adjusted to reflect major annexation and boundary changes which occurred since 1980. 1979 base estimates. The 1980 census PCI figures for small areas are subject to sizable sampling variability, causing them to lack sufficient statistical reliability for use in the estimation process. For this report, the 1979 PCI shown for subcounty areas with a 1980 census sample population estimate of less than 100 is the 1980 census PCI figure for the county.

For subcounty updating, the 1979 total money income was divided into two components:

1. Taxable income which is approximately comparable to that portion of income included in IRS adjusted gross income and

2. Transfer income such as Social Security and Public Assistance payments which, for the most part, is not included in adjusted gross income.

1987 per capita income updates. The taxable income portion of the 1979 money income was updated using the percent change in adjusted gross income (AGI) per exemption as computed from IRS tax return data. However, if the number of IRS tax returns for any area was very small, or if the ratios of exemptions to the population or the change in the ratios for any update period were not within an acceptable range, the IRS data for the subcounty area was not used in the update process. In such cases, the average percent change in AGI per exemption for similar governmental units was used. Similarly, if the IRS data for a particular subcounty area passed the above conditions, but the percentage change in AGI per exemption was excessively large or small compared with that for similar units in the county, the change was constrained to a proportion of the average change of similar units.

Because of a lack of information about transfer income below the county level, the percentage change in per capita transfer income at the subcounty level was assumed to be the same as that implied by the BEA estimates at the county level.

The estimates of per capita taxable income and transfer income were multiplied by population and adjusted separately to the county controls and were then combined to produce total money income. The PCI estimates were formed by dividing the total money income aggregates by the population estimates. As with the 1979 estimates for subcounty areas with a 1980 population of less than 100, the 1987 county PCI was used.

ACCURACY

To evaluate the per capita income estimates for 1979, the file containing the administrative estimates was matched to a file containing per capita income figures from the 1980 decennial census. Matches were achieved for all States, 3,129 counties and 41,048 subcounty areas. (More than one area is required for some incorporated governmental units.)

The average absolute percent error in per capita income for all matched subcounty areas was 17.0 percent. This compares with 1.9 percent for all States and 6.5 percent for all matched counties. Subcounty areas of 50,000 persons or more averaged 4.7 percent error in per capita income, compared with areas of populations less than 100 with an average error of 62.5 percent.
